01 EXECUTIVE SUMMARY & INVESTMENT HIGHLIGHTS

Àjọşẹ is a pioneering collaborative fintech platform transforming informal **Rotating Savings and Credit Associations (ROSCAs / Ajo / Esusu)** into institutional-grade, credit-backed financial circles. By combining a **non-custodial pass-through banking architecture** with algorithmic pre-join underwriting, direct Open-Banking mandate sweeps, and institutional debt restructuring, Àjọşẹ eliminates the default risk that has plagued informal community finance for centuries.

Key Investment Highlights:

- **Proven Cultural Demand:** Over 60% of Nigerian adults actively contribute to an Ajo or Esusu circle; Àjọşẹ digitizes existing, highly entrenched behavior.
- **Structural Negative-CAC Flywheel:** Acquiring 1 Group Admin automatically onboard 10 to 20 verified depositors for free, creating ultra-lean unit economics.
- **No Custodial Balance-Sheet Risk:** Pass-through settlement rails route funds directly through verified bank settlement accounts—avoiding costly banking capital reserves.
- **Proprietary Underwriting Moat:** Dynamic bureau pulls (CRC/FirstCentral), YouVerify identity checks, and automated Credit Direct Limited (CDL) loan restructuring.

Production-Ready Stack & Partnerships:

- **Open-Banking Engine:** Integrated with **Mono** for Direct Debit mandates, bank statement debt-to-income (DTI) analysis, and instant NIP payouts.
- **Identity Verification:** Real-time BVN/NIN validation & multi-bank discovery via **YouVerify**.
- **Credit Bureau Integration:** Automated delinquency & default reporting pushed to **CRC Credit Bureau**, **FirstCentral**, and **CreditRegistry**.
- **Default Guarantee Facility:** Commercial loan restructuring engine converting unpaid shares into underwritten personal loans with **Credit Direct Ltd.**

02 THE PROBLEM: THE FRAGILITY OF A \$30B+ INSTITUTION

1. The Devastating Early-Collector Default

In traditional circles, members who collect their pooled payout in turns 1, 2, or 3 frequently disappear, delay, or refuse subsequent contributions. Honest members bear the entire loss, causing the circle to collapse with zero legal recourse.

2. Administrative Chaos & Social Burnout

Organizers spend 20+ hours per month deciphering blurry WhatsApp bank transfer screenshots, reconciling handwritten ledger books, and arguing with members over payment dates and turn allocation.

3. Complete Credit Invisibility

A contributor can faithfully remit ₦200,000 monthly for years through community circles, yet remains invisible to formal banks because informal Ajo transfers build zero verifiable national credit history.

4. Counterparty & Custodial Fear

Users are terrified of untrusted admins or unvetted apps fleeing with collected funds. The absence of automated transparent ledgers leaves contributors feeling anxious about the safety of their capital.

03 THE SOLUTION: ENGINEERED FOR TRUST & TRANSPARENCY

Àjòṣe digitizes the rotating contribution lifecycle from onboarding to final settlement, substituting blind trust with automated code, open-banking mandates, and verifiable identity.

THE AUTOMATED ÀJÒṢE LIFECYCLE ENGINE

1. Non-Custodial Pass-Through Architecture

Àjòṣe acts purely as an automated technology orchestrator, not a commercial deposit bank. Contributions pass directly from members' bank accounts into authorized settlement accounts via Mono Direct Debit, and payouts route immediately to the turn collector. *This regulatory approach removes balance-sheet liability, avoids capital reserve drag, and eliminates the risk of platform float embezzlement.*

2. Frequency Grace Periods & Collection Cutoffs

Informal collections fail because payment timing is erratic. Àjòṣe hardcodes structural collection grace periods:

- **Monthly Groups:** 5-day grace period (Opens 1st, cut-off & payout executes on **5th of month**).
- **Weekly Groups:** 2-day grace period (Opens Monday, cut-off Tuesday).
- **Bi-Weekly Groups:** 3-day grace period (Opens Monday, cut-off Wednesday).

04 COMPARATIVE ANALYSIS: WHY DIGITAL AJO WINS

Platform Dimension	Informal WhatsApp Groups	Traditional Commercial Banks	Àjòṣe ('ajocore')
Turn Automation	Manual, prone to constant arguments	Unavailable / Individual loans only	Automated Turn Algorithm
Defaulter Protection	Zero (victim loses capital)	Requires heavy collateral / salary lien	CDL Personal Loan Conversion
Credit History Impact	Zero (unreported cash/transfers)	Traditional bureau records only	CRC & FirstCentral Bureau Feeds
Payment Collection	Manual screenshots & fake alerts	Standing orders (frequent bounce)	Mono Open-Banking Auto-Sweep
Exit Governance	Members bolt with cash; drama	Rigid fixed-term penalties	15% Fine (10% Admin / 5% Ajose)
Admin Experience	15-25 hrs/mo chasing defaulters	Branch visits & paper paperwork	Zero Stress Executive Command Desk

05 THE UNFAIR ADVANTAGE: TRIPLE-BARRIER UNDERWRITING & RECOVERY

While competitors offer basic group ledger UIs, Àjòṣe has engineered an **institutional-grade credit risk infrastructure** that turns informal social trust into legally enforceable, underwritten credit assets.

BARRIER 1

Pre-Join Underwriting

Implemented in `/api/underwriting/pre-join`. Before joining any circle:

- **YouVerify Check:** BVN & NIN biometric match + multi-account bank discovery.
- **Mono Statement Parsing:** 6-month transaction analysis verifying payroll employer, monthly inflows, and Debt-to-Income (DTI).
- **Bureau Query:** Pulls live score (300–850) from CRC Credit Bureau & FirstCentral.

BARRIER 2

CDL Loan Conversion

Implemented in `src/utls/recovery.ts`. If an auto-sweep fails:

- **Pool Kept Whole:** Institutional lender **Credit Direct Limited (CDL)** advances the contribution to the receiving member.
- **Debt Restructuring:** The defaulter's debt converts into an underwritten 3-month personal loan with a **5% flat late fee + 2.5% monthly penal interest**.

BARRIER 3

Credit Bureau Delinquency

Implemented in `src/utls/creditBureau.ts`:

- **Immediate Bureau Reporting:** Pushes formal default notices to CRC Credit Bureau, FirstCentral, and CreditRegistry.
- **Systemic Blacklisting:** -50 pt penalty to global Àjòṣe Score, auto-sweep freeze, and notification to connected social guarantors.

THE ÀJÒṢE ALGORITHMIC CREDIT SCORE MODEL:

$$\text{Àjòṣe Score} = (\text{National Bureau Score} \times 40\%) + (\text{Mono Cashflow Stability} \times 35\%) + (\text{Platform Track Record} \times 25\%)$$

**Members with active external defaults or composite scores under 60 are automatically barred from entering standard rotation circles.*

06 ENFORCEABLE MID-CYCLE EXIT RULES (CODIFIED IN CONTRACT)

Traditional ROSCAs crumble when members exit mid-cycle. Àjòṣe enforces strict programmatic exit governance:

1. Leaving Before Payout Turn:

A mandatory **15% Early Departure Fine** is debited via Mono mandate (10% goes to the Admin for schedule disruption; 5% to Àjòṣe revenue). *The departing member must wait until their scheduled turn to collect past contributions minus the 15% fine* —preventing liquidity drain.

2. Leaving After Collecting Payout:

Members cannot abandon subsequent rounds. Their Mono Direct Debit mandate remains permanently active for scheduled debits, a 15% breach fine is debited immediately, -50 points is assessed, and national credit bureau default filings initiate.

07 TECHNICAL ARCHITECTURE & STACK VERIFICATION

// PRODUCTION SYSTEM SPECIFICATION & REPOSITORY MAPPING

Frontend & Mobile Engine:
Next.js 16 (App Router), React 19, TypeScript, Tailwind CSS v4, Framer Motion, Capacitor v8.5 native iOS/Android bridge.

Data & Governance Layer:
Supabase PostgreSQL with Row Level Security (RLS), Supabase SSR, Admin Client RBAC, and automated Vercel Cron sweep routes.

Fintech & Rail Integrations:
Mono Open Banking (Direct Debit & Transfers), YouVerify (BVN/NIN), CRC Credit Bureau API, Resend (transactional email alerts).

08 MARKET SIZE: A MASSIVE INFORMAL MARKET GOING DIGITAL

TOTAL ADDRESSABLE MARKET

\$30B+

Annual contribution volume across informal Rotating Savings & Credit Associations (ROSCAs) throughout Sub-Saharan Africa.

SERVICEABLE ADDRESSABLE MARKET

\$8.4B

Addressable digital Ajo volume in Nigeria, covering 40M+ active ROSCA contributors in the 60M+ banked adult population.

SERVICEABLE OBTAINABLE (36 MO)

\$650M

Projected annual contribution volume across 50,000 active circles with 500,000 active contributor accounts.

09 BUSINESS MODEL & DIVERSE MONETIZATION CHANNELS

1. 2% Platform Payout Take-Rate (Primary)

Deducted automatically on every successful rotational disbursement. Strictly capped at **₦15,000 (\$10) max per payout** to drive massive adoption across affluent and corporate alumni circles.

2. 5% Departure Fine Revenue Share

Whenever a participant defaults or exits mid-cycle, Àjoşe retains **5% of the total contribution due** (with 10% distributed directly to the Admin for schedule disruption).

3. CDL Loan Restructuring Spread

Revenue sharing on interest and facility origination fees generated by Credit Direct Limited when restructured delinquent debts convert into personal consumer loans.

4. B2B Corporate & Cooperative Licensing

White-label cooperative modules and enterprise payroll-deduction integrations provided to commercial market unions, alumni federations, and corporate employers.

10 THE NEGATIVE-CAC VIRAL FLYWHEEL & UNIT ECONOMICS

Unit Economics (10-Member Sample Group)

Monthly Contribution / Member	₦50,000 (\$33)
Total Monthly Group Pool	₦500,000 (\$333)
Cycle Duration (10 Months)	₦5,000,000 (\$3,330 GCV)
Àjoşe Revenue (2% • ₦10k × 10)	₦100,000 (\$67 net)
Blended CAC to Acquire Admin	₦8,500 (\$5.60)
LTV / CAC Ratio	> 11.7x

The Negative-CAC Growth Flywheel

Traditional fintechs spend \$15-\$30 in digital ads to acquire a single retail depositor. **Àjoşe only acquires the Group Admin.**

The Admin then invites **10 to 20 trusted members for free** via SMS and WhatsApp invite links. Every invited user is fully verified via BVN and onboarded into our database at zero marginal acquisition cost. Within 6 months, 24% of invited members create their own new circles.

11 3-YEAR FINANCIAL MODEL & GROWTH PROJECTIONS

Key Financial Metric	Year 1 (2026)	Year 2 (2027)	Year 3 (2028)
Active Registered Circles	3,200 Groups	18,500 Groups	62,000 Groups
Total Active Depositor Accounts	38,400 Users	240,000 Users	860,000 Users
Gross Contribution Volume (GCV)	\$24,000,000	\$165,000,000	\$620,000,000
Platform Take-Rate Revenue (2%)	\$480,000	\$3,300,000	\$12,400,000
Ancillary Revenue (Fines, KYC, Loans)	\$95,000	\$620,000	\$2,100,000
Total Net Revenue	\$575,000	\$3,920,000	\$14,500,000
Gross Profit Margin	78.2%	84.1%	88.5%
EBITDA	(\$320,000)	+\$840,000	+\$5,800,000

12 THE ASK & CAPITAL ALLOCATION (\$1,250,000 SEED)

Capital Allocation Plan:

40% • Growth & Admin Acquisition	\$500,000
25% • CDL Facility Guarantee Reserve	\$312,500
20% • Engineering & Mobile Optimization	\$250,000
15% • Licensing, PISP & Legal Compliance	\$187,500

18-Month Execution Milestones:

- **Scale to 15,000 Active Circles:** Surpassing \$100M in cumulative Gross Contribution Volume (GCV).
- **Complete Nationwide CDL Expansion:** Underwriting facility deployed across 36 states in Nigeria.
- **Launch Diaspora Cross-Border Rails:** Enable UK/US/Canada remittance circles directly settling into Nigerian accounts.
- **Cash-Flow Profitability:** Reaching operational cash break-even within 14 months of funding deployment.

13 SUMMARY INVESTMENT THESIS & CONTACT

Why Àjòṣe Represents an Exceptional Fintech Investment:

1. **Untapped Giant:** Formalizing an entrenched \$30B+ market that touches the daily lives of 40M+ people.
2. **High Regulatory Safety:** Non-custodial pass-through model evades the capital-reserve quagmire of neo-banks.
3. **Deep Technical Defensibility:** Full integration with national credit bureaus, Open Banking APIs, and institutional loan restructuring.
4. **Hyper-Lean Distribution:** Viral B2B2C acquisition structure creating superior LTV/CAC dynamics from day one.
